Re: The Notice of Proposed Rate Change for Interstate Natural Gas Company,  
Case No. 2006-00122

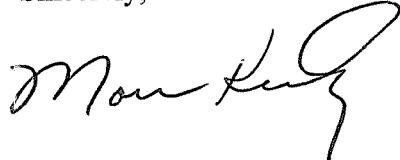

Dear Ms. O'Donnell:

Enclosed for filing in the referenced Case, please find an original and six (6) copies of the "Responses of Interstate Natural Gas Company to First Data Request of Commission Staff".

Under separate cover, Interstate is also filing with the Commission this date a Petition seeking confidential treatment of the responses to Data Requests Nos. 5.a. and 5.c. The information sought by those data requests is included in an attachment to said Petition, as required by regulation, but is not disclosed in the Responses filed here.

Should you require anything further in this regard, please contact me.

Sincerely,

Morris Kennedy

COMMONWEALTH OF KENTUCKY

RECEIVED

BEFORE THE PUBLIC SERVICE COMMISSION

JUN 27 2006

In the Matter of:

PUBLIC SERVICE  
COMMISSION

THE NOTICE OF PROPOSED RATE  
CHANGE FOR INTERSTATE NATURAL  
GAS COMPANY

CASE NO. 2006-00122

RESPONSES OF INTERSTATE NATURAL GAS COMPANY  
TO  
FIRST DATA REQUEST OF COMMISSION STAFF

Comes Interstate Natural Gas Company ("Interstate"), by counsel, and for its Responses to the First Data Request of Commission Staff herein states as follows:

**Request No. 1:** Provide the number of gas wells involved in serving the 139 farm tap customers.

**Response:** Fifty (50) wells serve the Interstate farm tap customers.

**Request No. 2:** Refer to Schedule I, Well Operator Cost.

a. Explain the basis for the calculation of the base pay and the number of minutes for meter reading, call-outs and maintenance and overtime.

**Response:** The base pay is calculated by averaging the salaries of all employees who work with farm tap customers. The number of minutes for meter reading, call-outs and maintenance are based on Interstate's records showing time spent historically on these duties.

Overtime is based on Interstate's records for overtime spent historically on farm tap service, and includes time spent receiving the customer call, preparing materials needed to repair the problem, travel to the problem location, time spent repairing, travel back to the shop and unloading of tools and materials. An average repair will consume approximately three hours, and Interstate's records indicate these repairs are generally made after normal working hours or on weekends when the employee(s) will receive overtime pay.

b. Overtime is listed as 4.5 hours. Explain whether the estimate is per year, per customer or the total number of overtime hours for the year.

**Response:** The overtime amount shown on the application (3 hours @ 150%) is the average annual amount of overtime worked per customer.

**Request No. 3:** Refer to Schedule 2, Administrative Personnel Cost. Explain the basis for the calculation of the base pay and the estimates of the number of hours for: the preparing, reviewing and inputting invoices; processing cash receipts and depositing in the bank; and collections and customer questions.

**Response:** Interstate has one administrative employee dedicated to performing those tasks set forth in Request No. 3 as they relate to farm tap customers. While this employee spends approximately one-half (1/2) of her forty (40) hour work week on these farm tap related duties, Interstate has chosen to allocate only one-quarter of her time for purposes of this case. This computes to the twenty (20) hour per month total shown on Schedule 2. It should be noted that while Interstate's Chief Financial Officer and staff accountant also spend some time each month on farm tap related matters, no costs related to their time/salaries have been included in Schedule 2.

**Request No. 4:** Refer to Schedules 4 and 5. The IRS mileage rate and the postal rate are currently greater than that used in the schedules, 44.5 cents per mile and 39 cents per stamp respectively. Does Interstate agree that the more current rates should be used?

**Response:** Yes.

**Request No. 5:** Refer to the first page of Interstate's application. Interstate has developed its gas cost based on the NYMEX strip and a 2-year average of the Appalachian Differential. Provide a list of other indices that would be applicable for pricing the gas.

**Response:** All, or essentially all, of the gas from the wells serving the farm tap customers which is not diverted for farm tap use is sold into interstate commerce under contracts tied to NYMEX Appalachian pricing. For this reason, the NYMEX strip, adjusted for Appalachian Differential is the only relevant index for pricing Interstate's farm tap gas. In this

regard, it is noted that Interstate has not based its rate increase request on a weighted average NYMEX Appalachian price. Interstate sells the great majority of its farm tap gas during the winter months when the NYMEX Appalachian price is at its yearly high. By basing its rate increase request on a straight, non-weighted, NYMEX Appalachian average, Interstate has chosen to understate its cost of service in providing farm tap gas.

- a. Provide the total volumes sold by Interstate during the past 24-month period.

**Response:** See Response to 5.c., below.

- b. Provide the volumes sold to farm tap customers during the past 24-month period.

**Response:** 13,740 Mcf

- c. Provide the per Mcf revenue derived from non-farm tap customers for the last 24 months.

**Response:** Interstate has filed a Petition with the Commission seeking confidential treatment of the information requested in Data Requests 5.a. and 5.c. The information sought by these Data Requests is set forth in an attachment to that Petition.

- d. The Btu conversion rate used in Interstate's application is 1.252. Provide the basis for this conversion rate as well as a gas analysis for the wells serving Interstate's farm tap customers.

- e. Provide any documentation used to arrive at the Btu conversion rate.

- f. Provide Schedule 6 (which was not included in the application).

**Response (d. e., and f. combined):** Interstate shows on Schedule 6, attached hereto, its calculation of weighted average Btu to Mcf conversion rate of 1.252 for the 50 wells serving its 139 farm tap customers. Five different groups of wells are shown on Schedule 6 as serving these customers. Those groups of wells, and the documentation supporting the weighted average Btu for each group, are as follows:

1. Buffalo Horn (formerly Baiden) customers: See Exhibit 6-1, Columbia Gas Transmission Corporation Detail Statement showing the 1.250 Btu factor for these wells.

2. Colony Coal & Coke customers: See Exhibit 6-2, Columbia Natural Resources Invoice for Gathering showing the 1.260 Btu factor for these wells.

3. Myrtle Polley customers: See Exhibit 6-3, Chandler Engineering Gas Analysis showing the 1.112 Btu factor for these wells.

4. Donald Cohen & Eli Schneider customers: See Exhibit 6.4, Chandler Engineering Gas Analysis showing the 1.220 Btu factor for these wells.

5. All other farm tap customers: These remaining 53 farm tap customers are served by numerous wells situate in various locations throughout the Interstate operating area. Interstate has calculated an average Btu content for these wells of 1.292. Interstate has gas analyses for 14 of these wells, which appear as Exhibits 6-5a through 6-5n. The average Btu content for these 14 wells is 1.340. The Btu factors for the remaining wells for which no analyses are extant are taken from historical records. Interstate submits that the average Btu content 1.292 appearing on its Schedule 6 is a reasonable average based on all information available to it.

**Request No. 6:** Refer to Interstate's Notice of Proposed Rate Change. The present rate is reported as \$5.50 per Mcf, however, Interstate's tariff lists several different rates for its customers, depending on the existing rate when Interstate acquired the customers.

- a. Is Interstate requesting approval to unify the rate across all customers?
- b. If yes, explain why Interstate would prefer a unified rate.
- c. Have the customers who do not pay \$5.50 per Mcf been notified of their increase and the estimated effect on their bill? If no, explain why these customers were not notified of this change. If yes, explain whether these customers received the notice included in the application or a different notice which reflects their existing rate.

**Response:** Interstate's current tariff, effective February 4, 2006, authorizes a rate of \$5.50 per Mcf to all farm tap customers with the following exceptions:

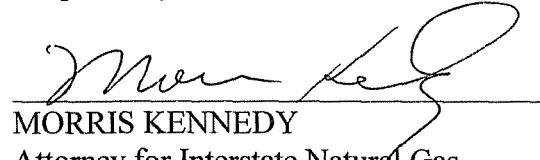

1. All Colony Coal & Coke wells (9 customers) and Myrtle Polley wells (12 customers) - rate \$4.49 per Mcf;
2. Scattered customers - flat rate of \$30 to \$40 per month.

First with regard to the "scattered customers", none remain as Interstate farm tap customers.

With regard to the 21 Colony Coal & Coke and Myrtle Polley customers, Interstate instituted a \$5.50 per Mcf rate for their service prior to the filing of the current (original) Interstate tariff. The currently effective Interstate tariff sheet setting forth its rates and charges should have reflected a rate of \$5.50 per Mcf, rather than a rate of \$4.49 per Mcf, to these 21 customers. These 21 customers received the same notice of proposed rate increase as all other Interstate customers as they are shown on Interstate's accounts as receiving farm tap service at the rate of \$5.50 per Mcf. Interstate is requesting approval to unify its rate at the level requested in its application. Interstate submits that a unified rate is a fair to all customers, permits efficiencies in billing and accounting methods and is a generally accepted principle of rate-making.

The persons responsible for providing the information contained herein are Jerome A. Kanney and Michael Burke, Interstate Natural Gas Company.

Respectfully submitted,

MORRIS KENNEDY  
Attorney for Interstate Natural Gas  
Company
